RESEARCH INTERESTS

Summary

My research interests range within and beyond the field of urban and regional planning, including: territorial development of Inner Areas; disaster risk reduction and post-disaster recovery; relationship between landscape quality and quality of life; landscape and environmental planning; etc. Besides research activities at international level, I am engaged in applied research to support to and collaborate with national and international organizations, as well as governmental institutions, such as the national Department Casa Italia, Presidency of the Council of Ministers, or the structure of the Extraordinary Commissioner of the Italian Government for the 2016 post-seismic reconstruction in Central Italy, where I have been member of the technical-scientific committee and I am currently an expert and advisor of the Commissioner. Bridging the gap between research and teaching, I am director of the 2° level master's degree at the University of Camerino in "Landscapes of inner areas".

Bibliometric Indicators
