SUMMER SCHOOL

sponsored by

THE ROLE OF THE GEOSCIENTIST IN THE ENERGY TRANSITION

Camerino, Italy 20 - 24 September 2021

The increasing energy request of our society combined with the environmental cost of the extensive use of coal and hydrocarbons requires an integrated and balanced management of energy resources.

A wide range of solutions already exist. Some of those directly produce low carbon power, such as solar, wind, marine energies, hydrogen, hydraulic energy, biogas, geothermal and nuclear.

While others, like CCUS, may help to sequestrate the greenhouse gas emissions from heavy industry. These different energy sources have distinct technical characteristics associated with advantages and disadvantages that must be gauged, compared and in some case combined. The development of the potential of each of these solutions requires a fundamental contribution from the geoscience disciplines.

This summer school proposes a panorama of various contributions putting them in the broader context, including practical input of the industry, operators, associations, researchers, political and administrative managers. Special attention will be given to the differences in the strategic choices of different countries and energy industry groups.

Although the jobs are sometimes presented as antagonistic, the competencies required to manage the new energy sources are somewhat like those needed for any natural resources. Understanding resources, reserves, uncertainties, and risk management are a vital competence that geoscientists may use on many occasions. Those topics will be presented and discussed during the week of the summer school.

The Summer School will deal on:

- _ The present-day energy mix landscape and scenarios
- Decarbonized sources of energy: geothermal, natural H2Bio-sourced energy: the three generations of biogas
- _ The mitigations of the anthropic CO2 emission: CCS and
- CCU
- Energy storage: gas or heatNeed of raw material for the new energy mix

Location

University of Camerino, Italy

Organizing committee

Sabina Bigi (Sapienza University of Rome) Roberto Gambini (RE&E) Isabelle Moretti (UPPA) Emanuele Tondi (Camerino University)

Registration & Fees

The school is dedicated to PhD and PostDoc student in geosciences. The training will alternate presentations with case studies that will be in the multidisciplinary team and the number of participants will be limited to 25. The fee is 300,00 € and includes enrolment and participation at the seminars and lectures, supporting teaching material, accommodation, one meal/day. Other expenses will be paid by participants.

Please send your application **before July 31st, 2021** to the following email address: **ssenergy@unicam.it**After your application will be validated, bank details will be sent by mail for the pre-registration fee of 150,00 €.

Monday 20

9.00

Opening of Summer School and welcome address by Authorities and Organizing Committee

10.00 Open Webinar
Present-day energy mix scenarios
Isabelle Moretti UPPA

12.00 - 13.00 Open Webinar Ricerca per la Ripresa e la Resilienza Carlo Doglioni President of INGV

15.00 - 18.00

GEO Technologies/Pratical: Subsurface structural modelling, cross-section balancing and restoration

Stefano Mazzoli UNICAM Matteo Basilici UNICAM Luca Mattioni Freelance

Tuesday 21

9.00 Open Webinar
Circular & Energy transition
Luca Meini Head of Circular
Economy, Enel Holding

10.00

Decarbonized source of energy: geothermal

Roberto Gambini RE&E

11.30 - 13.00

Decarbonized source of energy:

Sabina Bigi Sapienza, Università di Roma

15.00 - 18.00

GEO Technologies/Pratical: Thermodynamics of a geothermal system

Roberto Gambini and Alessandro Lenzi RE&E CCS exercises Sabina Bigi Sapienza, Università di Roma

Wednesday 22

9.00 Open Webinar
The energy transition:
developments in markets and
politics

Lucia van Geuns Strategic Advisor Energy - The Hague - HCSS

10.00 - 13.00

Natural Hydrogen Isabelle Moretti UPPA

15.00-18.00

GEO Technologies/Pratical: Natural reservoirs of geofluids: from fracture to flow

Emanuele Tondi UNICAM Miller Zambrano UNICAM Fabrizio Agosta Unibas Valentina Romano Sapienza, Università di Roma

Thursday 23

9.00 Open Webinar

Monitoring natural and industrially generated deformation processes

Davide Piccinini

and **Lauro Chiaraluce** INGV

10.00

Biogas Isabelle Moretti UPPA

Energy storage (Heat, gas, etc.) **Isabelle Moretti** UPPA

15.00 - 18.00

11.30 - 13.00

GEO Technologies/Pratical: Imaging of fluid in the subsurface: case studies

David lacopini Unina

Friday 24

9.00 Open Webinar Fossil Fuel and the Decarbonization

Massimo Nicolazzi Docente di Economia delle fonti energetiche UNITO

10.00

Waves Power and coastal dynamics
Chiara Invernizzi UNICAM

11.00

Wind and Solar
Franco Sansone RE&E

12.0 - 13.00

Natural resource assesment **Roberto Gambini** RE&E

15.00 - 17.00

Summer school closure

Organizing Committee
